(57) Abstract :

The present invention relates to a bionanocomposite material comprising a natural fiber (NF) on which metal oxide nanostructures are grown. More specifically, invention relates to fabrication of a scalable array platform consisting of metal oxide nanostructures grown onto the natural fibres extracted from plants of species Sansevieria. The bionanocomposite or metal oxide nanostructures based bio-platform of the present invention are highly suitable for degradation and removal of contaminants found in air, water and other liquids. Thus, the bionanocomposites of the present invention are ideal candidates for construction of materials which can be used in variety of applications such as air purification, water cleansing, biomedical application, flexible and portable electronic gadgets, smart textiles, etc. The invention also relates to a process for preparing the bionanocomposite and textile product formed thereof.
